[REDACTED]

June, 2007

Dear [REDACTED]

This is to inform [REDACTED] that Philips Lumileds believes that certain products made or sold by your company that contain Epistar's high-brightness AlInGaP LEDs are infringing Philips Lumileds' intellectual property rights.

In particular, Epistar's high-brightness AlInGaP LEDs have been found to infringe Philips Lumileds' U.S. Patent 5,008,718 ('718 patent) and are also infringing other Philips Lumileds patents on the use of wafer bonding to manufacture transparent-substrate and mirrored-substrate AlInGaP LEDs (U.S. Patent Nos. 5,376,580 and 5,502,316).

The U.S. International Trade Commission (ITC) issued a Notice of Commission Decision on May 9, 2007, in which it found that all of Epistar's OMA, MB and GB LED products infringe Philips Lumileds' '718 patent. Because of this infringement, the ITC has issued an Exclusion Order prohibiting the importation into the United States of these Epistar LEDs, packaged LEDs and lamps containing the infringing LEDs, and boards consisting primarily of arrays of such packaged LEDs. This exclusion order may significantly impact the availability of unlicensed infringing LEDs for [REDACTED] customers' supply chain.

The enclosed attachments from the law firm of Morgan Lewis & Bockius LLP and the ITC summarize the overall impact of the ITC's recent decision and the potential risks assumed by the use of these Epistar LED products.

Philips Lumileds intends to defend its intellectual property rights aggressively. If [REDACTED] continues to use Epistar LED products that infringe Philips Lumileds' patents, Philips Lumileds may seek all damages to which it is entitled, including enhanced damages for willful infringement.
